

Claims

1. An orthopedic apparatus comprising:

a shank;

a fan-shaped member which is provided at the front end of the shank; and

a coupling which is provided at the rear end of the shank and is to be connected to a driving source,

wherein:

the fan-shaped member is inclined with respect to an extension of the shank,

file ridges are formed on the fan-shaped member's surface which is oriented toward the rear end of the shank, and

the shank is constructed so as to rotate into clockwise direction and counterclockwise direction continuously.

2. The orthopedic apparatus according to Claim 1, wherein the shank is straight.

3. The orthopedic apparatus according to Claim 1 or Claim 2, wherein an attachment is provided which connects the rear end of the shank and the driving source.

4. The orthopedic apparatus according to any one of Claims 1 to 3, wherein the object to be trimmed is a cut surface

of an angle of jaw.
